Project description

The purpose of this project is to serve as a crypto exchange platform which focuses on futures trading. There are 2 different types of accounts, and a login is required before you can access anything. The admin account users will have access to important information, such as currently open positions in the whole exchange, the exchange's average trading volume and the accounts with the most traded volume for a period of time. They will also be able to delete non-admin accounts. The trading account users will have a live price action trading chart and be able to open positions of their choice- short or long, add funds to their account, edit their account's personal information and see their own statistics. Initially the only currency which will be tradeable is going to be Bitcoin.
